

Evasive Reverse Shell

Linux | ERS | Stealth Assessment Report

DISCLAIMER: This tool is intended for authorized security testing, CTF challenges, and educational purposes only. Unauthorized use is illegal.

Stealth Rating
20/20

Platform	Linux
Binary Size	1.6 MB
Post-Build Patches	897
Entropy	6.55
XOR Key	0xAB
Language	Rust

WSS/TLS reverse shell implant with Tor support, auto-reconnect, and full command interface.

Stealth Audit Results

#	Check	Result
1	Tool/command strings	PASS
2	Privilege names	PASS
3	Registry/CVE strings	PASS
4	Output messages	PASS
5	Build/debug paths	PASS
6	Library strings (BoringSSL/TLS)	PASS
7	Entropy (6.55)	PASS
8	Anti-debug	PASS
9	Self-delete	PASS
10	Binary size (1.6 MB)	PASS
11	No packer signatures	PASS
12	Stripped symbols	PASS
13	Process masquerade	PASS
14	Network/C2 indicators	PASS
15	YARA rule triggers	PASS
16	File metadata	PASS
17	Suspicious API imports	PASS
18	Runtime string leaks	PASS
19	XOR string encoding	PASS
20	Compilation flags	PASS

Defense Evasion Techniques

Technique	Description
XOR String Obfuscation	All sensitive strings encoded at compile time (key=0xAB)
Binary Patching	897 post-build patches scrub BoringSSL/TLS/build path strings
Process Masquerade	PR_SET_NAME to gvfs-udisks2- (GNOME daemon)
Anti-Core Dump	RLIMIT_CORE=0, PR_SET_DUMPABLE=0
Raw Syscalls	fchmodat via libc::syscall instead of libc::chmod
Self-Deletion	Unlinks own binary via /proc/self/exe
Sleep Encryption	XOR-encrypt memory markers during sleep
Minimal Binary	opt-level=z, LTO, stripped, panic=abort

Command & Control

Feature	Description
WSS over TLS	WebSocket Secure with BoringSSL
Tor Support	Optional .onion hidden service routing
Proxy Chains	SOCKS5 proxy support for redirectors
Exponential Backoff	5s initial to 5min max with 30% jitter
Auto-Reconnect	Infinite reconnection loop

MITRE ATT&CK; Mapping

ID	Technique
T1071.001	Web Protocols
T1573.002	Encrypted Channel
T1027	Obfuscation
T1036.004	Masquerading
T1070.004	Indicator Removal
T1059.004	Command Interpreter
T1082	System Information Discovery

Project Files

File	Purpose
src/main.rs	Implant source code
build.sh	Build + 897-patch binary scrub
setup.sh	Full automated deployment (Tor + certs + build + listener)
listener.py	WSS C2 listener (attacker side)
cleanup.sh	Remove all traces from attacker + victim

implant	Pre-built scrubbed binary (1.6 MB)
---------	------------------------------------

Companion Projects

Project	Platform	Stealth
